## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1,7,8,10,11 & 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Van Oort et al (6,101,815). Va Oort et al discloses a thermoelectric apparatus for cooling and regulating the temperature of an x-ray detector within a housing and comprising: x-ray detector (12) confined with a housing (52), a fan (40), a sensors (44,48) for measuring the temperature, a controller (46) that joins the temperature sensor and the thermoelectric/peltier device (30), and the system further comprising an inlet (42) and an outlet (56) to inherently provide means for a closed system. The housing receives a coolant air flow to cool the said x-ray detector (see figure 1). The said fan is design for any conventional design which may inherently be of a variable type (see column 2, lines 63-66).

### ***Allowable Subject Matter***

**Claims 16-26 are allowed over the prior art of record.**

Claims 2-6, 9 & 13-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Response to Arguments***

Applicant's arguments with respect to claims 1-25 have been considered but are moot in view of the new ground(s) of rejection.
